Quartz Worktop Care & Maintenance

Quartz worktops are naturally beautiful, durable and hygienic surface materials and, as your preferred worktop, is a wonderful investment. It is very low porous and therefore highly resistant to fluid absorption and everyday domestic stains.

Your quartz worktop requires very little maintenance. However, to keep it in pristine condition home owners do need to take a little special care.

Here are some useful tips to ensure your quartz worktop lasts a lifetime:

- Clean your worktop with warm soapy water to remove surface dirt. A mild detergent or dishwashing liquid is recommended. Rinse off with clean water and polish with a soft white cloth or paper towel.
- For very stubborn marks or residue Flash with Bleach spray may be used. Spray it on the affected area, wipe off immediately and rinse with water.
- Remove dried in spills by gently scraping the residue with a blunt plastic scraper or non-abrasive pad and then follow the above instructions.
- Do not use abrasive cleaners like oven cleaning pads or strong cleaners that contain a lot of bleach, ammonia or caustic acids.
- Avoid contact with heavy duty chemicals and solvents like paint and furniture stripper, battery acid, petrol, degreasers etc.
- To prevent discoloration avoid contact with permanent markers, inks, hair dyes, oil based soaps etc.
- **Do not expose your worktop to excessive heat. The use of trivets and hot pads under pots, pans and cookware is strongly advised.**
- Do not cut directly on the worktop. We recommend the use of chopping boards.
- Avoid any physical abuse to your worktop especially along exposed edges as this may cause chipping.
- You **DO NOT** need to ever seal your polished quartz worktop.
(However metropolis or honed quartz worktops may be sealed if desired)

If you have any further questions on the care and maintenance of your quartz worktop, please contact us on 0449340202 or 0153371155.
